SUMMARY

Software engineer who has spent 2.5+ years shipping production software for businesses in India and Germany. Since graduating in 2026 I have focused on C# and .NET, and I am currently building a full e-commerce web app on .NET. My shipped work so far is in Python (Django, FastAPI), React and TypeScript, taken from requirements through testing, deployment and support. Looking for a .NET or software engineering role.

EXPERIENCE

Freelance Software Engineer, Self-employed, Mumbai · Clients in India and Germany — Apr 2024 – Present

- Scoped, built, deployed and maintained software for six small businesses in India and Germany, plus two academic conference websites.
- Shipped a billing system for a trading company as an Electron desktop app and a Capacitor Android app (React, TypeScript, SQLite): GST tax invoices, quotations, proforma invoices and delivery challans, with versioned installers and auto-updates, now on version 5.
- Built a Django and PostgreSQL call-center CRM: CSV/XLSX lead import with column mapping, role-scoped views for admins, team leaders and agents, GST invoice PDFs, and a live break monitor over WebSockets (Django Channels).
- Built business websites on Cloudflare Workers and Vercel (Next.js, Astro) with WhatsApp lead capture, structured data for search, and Playwright tests, including a bilingual English/German site for a Germany-based trading startup.

Full Stack Developer, Brandenbed Living Spaces UG, Berlin, Germany · Remote contract — Sep 2025 – Nov 2025

- Built modules of the company's internal property-management web application in Django and Django REST Framework, covering properties, tenants, landlords, leads, rent payments and maintenance requests.
- Built staff dashboards and forms with Tailwind CSS and Flowbite, with data access scoped by employee role.
- Worked directly with the Berlin-based founders, reporting progress and adjusting scope as needs changed.

PROJECTS

E-commerce web app on .NET (in progress) · C#, .NET

- Full e-commerce web app I am building after graduating; code and a live demo will be published when ready.

NOVEM, e-commerce analytics platform · Python, FastAPI, DuckDB, Prophet, React, Tauri

- Local-first desktop app that turns store exports (CSV, Excel, Shopify, PostgreSQL) into KPIs, RFM segments, churn and lifetime-value models and Prophet forecasts, served by ~170 endpoints across 23 FastAPI routers.
- AI copilot that answers questions about the store's own data with a local Ollama model (RAG); customer PII is hashed on import; CI runs Ruff, pytest, ESLint and Vitest.

SKILLS

Languages: C#, Python, TypeScript, JavaScript, SQL, HTML, CSS

Backend: Django, Django REST Framework, FastAPI, Flask, Django Channels, REST APIs

Frontend: React, Next.js, Astro, Tailwind CSS

Data: PostgreSQL, SQLite, DuckDB, pandas, Prophet, Elasticsearch

Desktop & mobile: Electron, Tauri, Capacitor (Android)

Cloud & tools: Cloudflare Workers, D1, R2, Vercel, Git, GitHub Actions, Playwright, pytest

EDUCATION

B.E. Computer Science & Engineering (Data Science), Saraswati College of Engineering, Mumbai · CGPI 8.19 — 2023 – 2026

Diploma in Computer Engineering, Abdul Razzaq Kalsekar Polytechnic, MSBTE · 72.63%, First Class — 2021 – 2023

ACHIEVEMENTS

- Grand Finalist, Smart India Hackathon 2025 (Software Edition), Ministry of Education, Dec 2025
- 2nd Place, SCOE AVISHKAR 2025 project competition, Saraswati College of Engineering, Apr 2025
